Abralon®

For sanding rounded surfaces, corners and sharp edges

- ✓ Foam open cell structure
- ✓ Even surface pressure
- ✓ Versatile application
- ✓ Wet sanding application
- ✓ Smooth sanding pattern
- ✓ Flexible
- ✓ Long lasting

Abralon is a versatile sanding disc designed for use on both smooth and contoured surfaces. Its innovative flexible structure minimises the possibility of pressure marks while enabling the creation of a smooth sanding pattern on sloped surfaces and edges. The flexible weave lets water and air flow freely, making sanding cleaner.

Recommended for wet sanding, Abralon features a hook-and-loop soft sponge backing, ideal for use by hand, on random orbital sanders or with rotary tools for the fine sanding of timber, application of oil finishes, and the refinement and polishing of glass, composites, metal and painted surfaces.
